

Contractor Q & A
Contract# EDB-05-18-C103

Q1: What are the weights of the tanks and conex ?

A1: Please see the attached PDF's for approximate item weights from the barging company for the significant portion of project materials and equipment.

Please note that there is additional equipment not indicated on the invoices related to the BFF construction that will be on the barge and are required to be unloaded and transported by the contractor.

Q2: Is the contractor expected to install the chain link fence as in the contract?

A2: Contract C103 does not pertain to the fencing portion of the BFF Project.

Q3: Timber construction:

1. According to the specifications the contractor must comply with the AITC standards for the timbers. How does the cedar fit this standard?
2. The timbers are to be graded and meet DOC PS 20 grading standard. And have a grade stamp. How does this apply to Yellow cedar?
3. The timbers are to be dressed to SSS standards, please explain

A3: Answer for Questions 1-3 on timber: The City has the latitude to make changes/substitutions to the original project plans. Yellow cedar may be substituted by the contractor and must meet the following specifications. Rough cut 6"x6"x12' timbers must be sound, no shake, no rot, solid knots no larger than 2.5". Timbers to be coated with application of wood sealer and water repellent prior to assembly. Timbers dressed to S4S standards (Surfaced 4 Sides) not required. Timbers to be inspected and approved by City Project Manager prior to installation.

Q4: Stainless steel fasteners are specified for treated timbers, what specifications does the city have for yellow cedar?

A4: Same fasteners are required. Contractor may use either stainless or galvanized.

Q5: I see that the timbers are to be used to level and space the tanks and conex off the ground, and to provide a solid base for some of the piping. I have been unable to find where, how many and what size fasteners are required.

A5: The plans do not clearly specify. Fasteners needed will be 1/2"x8" and 5/connection row. A change to the connection specification in Section 06130 Part 3(c)(1) shall be to keep same direction of insertion, but offset each line of connections rather than to install with same orientation.

Q6: If Stainless Steel bolts are approved as fasteners for the timbers, what grade of stainless is required?

A6: Grade 18-8, type 304 or Type 316 are acceptable. Other grades may be acceptable, but must first be approved by the City Project Manager.
